EFI

To use OVMF/AAVMF for EFI add these parameters to `qemu-system-*`. Normally you can find `OVMF_CODE.fd` and `OVMF_VARS.fd` (or variants of them) in `/usr/share`

```
-drive if=pflash,format=raw,readonly,file=OVMF_CODE-pure-efi.fd
-drive if=pflash,format=raw,file=OVMF_VARS.fd
```
